Re: Tenneco Minerals  
Gold Strike  
Overliner

Dear Mr. Kluksdahl:

Based on our review of the Phase 2 portion of the Gold Strike project, literature and operations information, the maximum size of overliner material for the remainder of the Gold Strike project must be less than 3/8 inch.

This is deemed necessary for the protection of the geomembrane as a part the design.

If compliance with this requirement is not possible, please submit appropriate and relevant information or documentation for further consideration.

If there are any questions, please let us know.

Sincerely,

Water Pollution Control Committee

Don A. Ostler, P.E.,  
Executive Secretary
